ABOUT THE PROJECT

What is **Big Data**?

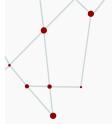

Overview

Big data refers to the large, diverse sets of information that grow at ever-increasing rates. It encompasses the volume of information, the velocity at which it is created and collected, and the variety of the data points being covered

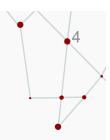

Aim

In this project, we are supposed to build a working environment for a big data system and perform data analysis using big data technology

Project Goals

- 1. Build A Real Big Data system In SPU
- 2. Analyzing Data using Big Data Techniques
- 3. Make the environment ready to receive future big data projects

Reference Study

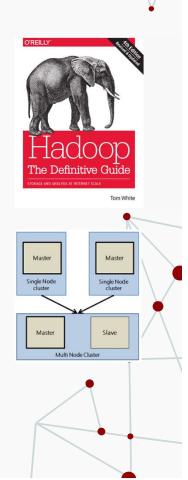

1. Hadoop The Definitive Guide: Tom White

We worked using the reference to build the system and work on the best possible performance

2. Hadoop Multinode Cluster Setup

We chose to work with Multinode Cluster In order to achieve the best performance with the available servers

https://www.projectpro.io/hadoop-tutorial/hadoop-multinode-cluster-setup

System Technologies

Apache Hadoop

Map Reduce

Apache Hive

Python

Apache Pig

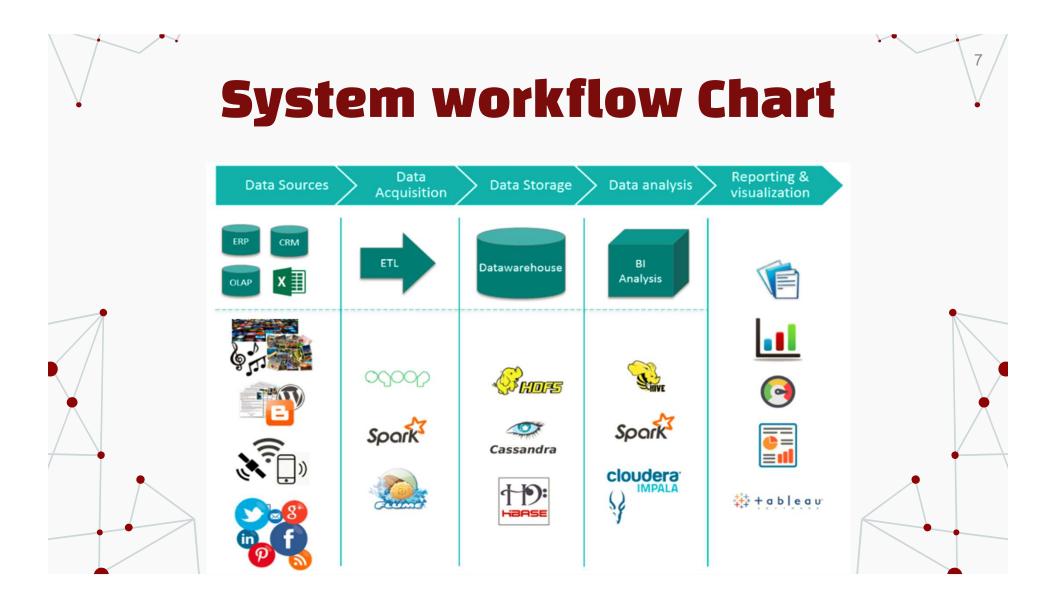

Java

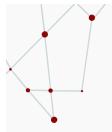

- 1. Get an overview of the available servers
- 2. Start working on the servers and install the appropriate operating system
- 3. Make a plan to build the system in more than one step within 4 weeks
- 4. Find data to test on the system with metadata

About Data!

- Forex tick data huge database since april 2020
- Below, you'll find the major currency pairs with tick-bytick <u>historical rates</u>. This data is <u>top-of-book</u>, <u>tick-by-tick market data</u>, <u>with fractional pip spreads in millisecond detail</u>. All timestamps are based on GMT.

Part Of The Data Used

Currencies traded between two countries

Date and time of currency trading **Purchasing** price

selling price

Unfinished Works

- 1. Make a plan to analyze more than one step within 4 weeks
- 2. Analyzing Data using Big Data Techniques
- 3. Make the environment ready to receive future big data projects
